## INTRODUCTION.

*Previous publication.*—All results of spirit leveling in Arizona previously published by the United States Geological Survey in Bulletin 463 and all the results of later work are included in this report. The elevations are now based on heights of bench marks along the precise-level line of the United States Coast and Geodetic Survey from San Diego, Cal., via Mellen and Flagstaff, Ariz., to Albuquerque, N. Mex., as adjusted by the Coast and Geodetic Survey in 1912, and on the precise line of the Geological Survey between Yuma, Ariz., and the Arizona-New Mexico line.

*Personnel.*—The field work previous to 1903 was done under the general direction of R. U. Goode, geographer; that for 1903 to 1906, inclusive, under E. M. Douglas, geographer; that for 1907 under R. B. Marshall, geographer; and the later work under T. G. Gerdine and G. R. Davis, geographers, under the general direction of R. B. Marshall, chief geographer. The names of the respective levelmen are given in the introductions to the several lists. The office work of computation, adjustment, and preparation of lists was done mainly by S. S. Gannett, geographer, under the general direction of E. M. Douglas, geographer.

*Classification.*—The elevations are classified as precise or primary, according to the methods employed in their determination. For precise-level lines instruments and rods of the highest grade are used, each line is run both forward and backward, and every precaution is taken to guard against error. The allowable divergence between the forward and the backward lines in feet is represented by the formula  $0.017 \sqrt{D}$ , in which D is the distance in miles between bench marks. For primary lines standard Y levels are used; lines are run in circuits or are closed on precise lines, with an allowable closing error in feet represented by  $0.05 \sqrt{D}$ , in which D is the length of the circuit in miles, sufficient care being given to the work to maintain this standard. For levels of both classes careful office adjustments are made, the small outstanding errors being distributed over the lines.

*Bench marks.*—The standard bench marks are of two forms. The first form is a circular bronze or aluminum tablet (*C* and *E*, Pl. I.),  $3\frac{1}{2}$  inches in diameter and one-quarter inch thick, having a 3-inch stem, which is cemented in a drill hole in solid rock in the wall of some public building, a bridge abutment, or other substantial masonry structure. The second form (*F*, Pl. I), used where masonry or rock is not available, consists of a hollow wrought-iron post  $3\frac{1}{2}$  inches in outer diameter and 4 feet in length, which is set about 3 feet in the ground. The bottom is spread out to a width of 10 inches in order to give a firm bearing on the earth. A bronze or aluminum-bronze cap is riveted upon the top of the post. A third style of bench mark with abbreviated lettering (*B* and *D*, Pl. I) is used for unimportant points. This consists of a special copper nail  $1\frac{1}{2}$  inches in length driven through a copper washer seven-eighths inch in diameter. The tablets as well as the caps on the iron posts are appropriately lettered, and where States have cooperated in the work the fact of such cooperation is indicated by the addition of the State name (*G*, Pl. I.).

The numbers stamped on the bench marks described in the following pages represent the elevations to the nearest foot as determined by the levelman. These numbers are stamped with  $\frac{3}{16}$ -inch steel dies on the tablets or post caps to the left of the word "feet." The office adjustment of the notes and the reduction to mean sea-level datum may so change some of the figures that the original markings are 1 or 2 feet in error. It is assumed that engineers and others who have occasion to use the bench-mark elevations will apply to the Director of the United States Geological Survey, at Washington, D. C., for the adjusted values, and will use the markings as identification numbers only.

*Datum.*—All United States Geological Survey elevations are referred to mean sea level, which is the level that the sea would assume if the influence of winds and tides were eliminated. This level is not the elevation determined from the mean of the highest and the lowest tides, nor is it the half sum of the mean of all the high tides and the mean of all the low tides, which is called the half-tide level. *Mean sea level is the average height of the water, all stages of the tide being considered.* It is determined from observations made by means of tidal gages placed at stations where local conditions, such as long, narrow bays, rivers, and like features, will not affect the height of the water. To obtain even approximately correct results these observations must extend over at least one lunar month, and if accuracy is desired they must extend over several years. At ocean stations the half-tide level and the mean sea level usually differ but little. It is assumed that there is no difference between the mean sea levels determined from observations in the Atlantic Ocean, the Gulf of Mexico, and the Pacific Ocean.

The connection with tidal stations for bench marks in certain areas that lie at some distance from the seacoast is still uncertain, and this fact is indicated by the addition of a letter or word to the right of the word "Datum" on tablets or posts. For such areas corrections for published results will be made from time to time as the precise-level lines of the United States Geological Survey or other Government organizations are extended.

*Topographic maps.*—Maps of the following quadrangles wholly or partly in Arizona have been published by the United States Geological Survey up to July 1, 1915. They may be obtained (except as noted) for 10 cents each or \$3 for 50, on application to the Director of the Survey at Washington, D. C.

### PRECISE LEVELING.

Benson, Casa Grande, Cochise, Dragoon, Gila Bend, Heaton, Langhorne, Mohawk Station, Patagonia, Red Rock, San Simon, Sentinel, Tucson, Wellton, and Yuma quadrangles.

### COCHISE, MARICOPA, PIMA, PINAL, AND YUMA COUNTIES.

The following elevations are the unadjusted results of a precise-level line run eastward along the Southern Pacific R. R. from Yuma to Tucson by M. S. Bright in 1905, and from the New Mexico line near San Simon to Tucson by W. A. E. Hult and T. A. Green in 1907.

<sup>1</sup> Bradshaw Mountains, Congress, and Jerome sheets show parts of Prescott quadrangle on a larger scale.

<sup>2</sup> Bright Angel and Shinumo sheets show parts of Kaibab quadrangle on a larger scale.

<sup>3</sup> Vishnu sheet shows part of Echo Cliffs quadrangle on a larger scale.

## Jerome and Williams quadrangles.

## COCONINO AND YAVAPAI COUNTIES.

The following are the results of a line of precise levels from Del Rio north along the Santa Fe, Prescott & Phoenix Ry. to Ashfork, thence east along the Atchison, Topeka & Santa Fe Ry. to Williams. The leveling was done in 1905 by M. S. Bright.

In 1909 the precise line of the United States Coast and Geodetic Survey along the Atchison, Topeka & Santa Fe Ry. redetermined certain bench marks between Ashfork and Williams, and the results appear in the following list.

## JEROME QUADRANGLE.

**Arivaca, Benson, Bisbee, Dragoon, Hereford, Nogales, Patagonia, Red Rock, Tucson, and Winkelman quadrangles.**

#### COCHISE, PIMA, PINAL, AND SANTA CRUZ COUNTIES.

The elevations in the following list are based upon precise levels along the Southern Pacific R. R. from Yuma. Additional elevations in the Benson, Dragoon, Patagonia, Red Rock, and Tucson quadrangles are given in the list of results of precise leveling, pages 7-16.

The leveling in the Winkelman quadrangle was done by Thomas Winsor in 1900, by M. S. Bright in 1904, and by L. F. Biggs in 1909; that in the Benson quadrangle by Chester Irvine in 1901, by Bright in 1903 and 1904, by R. H. Sargent in 1905, and by Cornelius Schnurr in 1913. The leveling in the Arivaca, Nogales, and Red Rock quadrangles was done by Bright in 1903; in the Patagonia and Tucson quadrangles by Bright in 1903 and 1904; and in the Bisbee and Hereford quadrangles by Irvine in 1901. Additional leveling in the Bisbee quadrangle was done in 1914 by S. H. Birdseye.

The stamped elevations are based upon elevations determined by the International Boundary Commission and found later to be unreliable.

**Don Luis 30' quadrangle, including Bisbee and Douglas 15' quadrangles.****COCHISE COUNTY.**

The elevations in the following list were determined by primary leveling. The bench marks are on closed circuits but depend upon a single unchecked line from Bisbee to sec. 36, T. 23 S., R. 25 E. That line formed part of a circuit which formerly appeared to close satisfactorily and had been adjusted between Boundary Monuments 92 and 88, but which now has a closure error of 1.9 feet due to the discovery of an error of 1.6 feet in the end of the line by leveling of 1913.

Orthometric corrections have been made and the whole corrected to accord with the 1912 adjustment of precise leveling.

The elevation at Bisbee is now taken to be 1.2 feet greater than that published in Bulletin 463.

The leveling was done in 1912 by Cornelius Schnurr.

NOTE.—The lists as now corrected make the following closures upon Boundary Commission elevations: Plus 14.40 feet at monument 92; plus 16.24 feet at monument 88; plus 9.20 feet at monument 84; and plus 12.87 feet at monument 1 near El Paso.

Chiricahua, Cochise, Pearce, and San Simon quadrangles (Chiricahua National Forest).

#### COCHISE COUNTY.

The elevations in the following list are based upon the precise-level line along the Southern Pacific R. R. For additional elevations in the Cochise and San Simon quadrangles refer to precise-level list, pages 7-16. Additional elevations in the San Simon and Chiricahua quadrangles are given in list for New Mexico (Bulletin 464.) The leveling was done in Cochise, Chiricahua, and San Simon quadrangles in 1907 by T. A. Green and in 1914 by Cornelius Schnurr, and in Pearce quadrangle in 1907 by Green, in 1913 and 1914 by Schnurr, and in 1914 by S. E. Taylor. Leveling was done also in San Simon quadrangle in 1914 by S. H. Birdseye. Orthometric and rod corrections have been applied.

## Duncan and Morenci quadrangles.

## GRAHAM AND GREENLEE COUNTIES.

The elevations in the following list are based on heights of bench marks in adjacent quadrangles. The leveling in Morenci and Duncan quadrangles was done in 1900 by J. T. Stewart and Thomas Winsor and in 1902-3 by Chester Irvine. Additional leveling was done in 1912-13 in Morenci quadrangle by R. R. Monbeck, and in Duncan quadrangle in 1914 by S. H. Birdseye. Orthometric and rod corrections have been applied in the latter work.

<b>Christmas, Desert Well, Florence, Fort Thomas, Gila Butte, Gilson, Globe, Heaton, Maricopa, Mesa, Phoenix, Ray, Sacaton, San Carlos, and Solomonsville quadrangles.</b>	

**GILA, GRAHAM, MARICOPA, AND PINAL COUNTIES.**

The elevations in the following list are based on an aluminum tablet stamped "1090" set in north front of the Maricopa County courthouse at Phoenix, the elevation of which is now accepted as 1,090.410 feet above mean sea level.

The leveling was done in 1899 and 1900 by Thomas Winsor, in 1900 and 1901 by J. T. Stewart, and in 1902, 1903, and 1904 by the Reclamation Service. Additional elevations were established in Christmas, Ray, San Carlos, and Solomonsville quadrangles in 1914–15 by S. H. Birdseye.

The six following bench marks were established by the United States Reclamation Service in 1902, 1903, and 1904:

**Bradshaw Mountains, Camp Verde, Congress, Jerome, New River, Santa Maria Mountains, and Wickenburg quadrangles.**

**MARICOPA AND YAVAPAI COUNTIES.**

The elevations in the following list are based on mean sea level datum in agreement with the elevations of bench marks at Ashfork by the United States Coast and Geodetic Survey. Part of the elevations were originally based on an iron post in the grounds of and 20 feet north of the courthouse at Prescott. The elevation of that bench mark is now accepted as 5,354.014 feet above mean sea level.

The leveling in the Bradshaw Mountains quadrangle was done by J. P. Darling and J. T. Stewart in 1900 and 1901; the work in the New River, Jerome, Santa Maria Mountains, and Congress quadrangles was done in 1901, 1902, and 1903 by Stewart.

All bench marks originally depending on the Prescott datum are stamped with the letters "Prsct," in addition to the figures of elevation.

The remaining elevations in the New River and Wickenburg quadrangles, where bench marks are stamped "Phnx," were originally based on the aluminum tablet in the courthouse at Phoenix, stamped "1090," the accepted elevation of which is 1,090.410 feet above mean sea level. The leveling was done in 1903 by Stewart.

**Camels Back, Fort McDowell, Livingstone, and Roosevelt quadrangles.****MARICOPA AND GILA COUNTIES.**

The elevations in the following list were originally based on an aluminum tablet stamped "1090" set in the north front of the Maricopa County courthouse at Phoenix, and accordingly all bench marks are stamped "Phnx" in addition to the figures of elevation. The corrected elevation of this bench mark is 1,090.410 feet above mean sea level.

The leveling was done in 1905 by Ress Philips.

**Bright Angel, Shinumo, and Vishnu quadrangles.****COCONINO COUNTY.**

The elevations in the following list are based on an aluminum tablet in rim rock north of Bright Angel Hotel at Grand Canyon, stamped "6866 Canyon." The elevation of this bench mark is accepted as 6,861.609 feet, as determined by primary levels along the Grand Canyon Ry., corrected to elevations of bench marks at Williams by precise leveling of the United States Coast and Geodetic Survey.

The leveling was done by J. T. Stewart in 1902 and 1903, and by M. S. Bright in 1904.

**Castle Dome, Ehrenberg special, Needles special, Parker, Picacho, Quartzsite, Wellton, and Yuma quadrangles.**

**MOHAVE AND YUMA COUNTIES.**

The elevations in the following list are based on a double-rodded primary-level line from San Bernardino to Yuma, based upon the United States Coast and Geodetic Survey precise-level line from mean sea level at San Diego. Additional elevations in the Yuma and Wellton quadrangles are given in the precise-leveing lists from Yuma east along the Southern Pacific R. R. Elevations in the California part of these quadrangles are given in Bulletin 342.

Most of the leveling in the Yuma and Wellton quadrangles was done in 1902-3 by G. L. Gordon and C. J. Hoover. A part of the work in the Blaisdell quadrangle was done in 1903 by L. D. Ryus. The leveling in the Picacho and Ehrenberg quadrangles was done in 1903 by C. Hartman, Gordon, and Ryus, in the Quartzsite quadrangle and the quadrangle south of it in 1903 by Ryus, and in the Parker quadrangle in 1902-3 by Hartman. The leveling in the Needles special quadrangle was done in 1902 by Morrison, Hartman, and S. E. Blout.

In 1909 the Coast and Geodetic Survey precise-level line along the Atchison, Topeka & Santa Fe Ry. redetermined bench marks near Mellen and Franconia. The Coast and Geodetic Survey 1912 adjustment values are given in the Needles special quadrangle.

## MOHAVE COUNTY.

The elevations in the following list are based on an iron post stamped "Y 540," set 5 feet east of the flagstaff on the drill ground at the Fort Mohave Indian Training School. Its elevation is accepted as 540.735 feet above mean sea level.

The leveling from Fort Mohave to Bulls Head dam site was done by C. R. Oldberg and afterwards checked by Goyne Drummond, both of the Reclamation Service.

The leveling from Bulls Head dam site to the head of Cottonwood Valley and return was done by Drummond. The circuit was closed at Bulls Head.
